

The Elixir logo is written in a white, cursive script font on a dark, rounded rectangular background.A banner with a light green background and a dark red border. The text "DesignPro Tools™ (Xerox)" is written in a bold, dark red sans-serif font. The background of the banner features a blurred image of a computer monitor and keyboard, overlaid with a grid of blue and white lines and binary code (0s and 1s).

Bring the power of Xerox resource creation and editing to any desktop!

Reduce Application Development Time

DesignPro Tools provides a visual interface that enables you to create and edit the forms, fonts and images you need for business communications

Never Write Another Line of Code Again

No coding/scripting is needed and no resource pre-conversions are required. After editing, resources can be saved in the desired print format and placed on the printer.

Advanced Form Design Tools

DesignPro Tools includes a powerful set of design and editing tools developed specifically for document creation. Create a wide range of document types quickly and easily including statements, policies, letters, coupons and more.

Powerful Font Editing

Create Xerox fonts from scalable TrueType or Adobe Type1 fonts. Existing Xerox raster fonts can be edited in a visual interface. Special characters can be added and character widths can be changed. Fonts can be slimmed, darkened and reversed.

Advanced Graphics Editing

Edit or create standard format graphic files including BMP, TIF, JPG, IMG or LGO. Clean up and edit bitmap graphics such as a scanned logos or signatures. Support for color, highlight, grayscale and black and white image formats and standard shading patterns.

Import Microsoft®, Adobe® and More

DesignPro Tools includes a powerful conversion feature so you can use documents created in Microsoft® Word, Adobe® PageMaker®, Adobe® Acrobat® and Adobe® InDesign®. Files are converted to the Xerox or Elixir format for editing and production.

Run Automated Conversions

DesignPro Tools provides powerful automation features allowing a user-defined lights-out operation for all conversion needs. Simply define the business rules for conversions and let DesignPro Tools process the files automatically.

Tagged Forms (Normalized Metacode)

DesignPro Tools provides sophisticated variable data merging capabilities to produce Normalized Metacode files for Image Sciences' DocuMerge.

Benefits

- **Eliminate unnecessary steps:**
No pre-conversion of Xerox resources needed, edit resources in native format
- **Programming skills not necessary:**
Create designs in familiar Windows interface
- **Improve printer performance:**
Tiling images into fonts is just one of the many ways DesignPro Tools can increase printer throughput
- **Utilize more document designs in your organization:**
Convert documents from Windows® applications

The most advanced resource tools for Xerox

Applications and Industries

Elixir proudly serves customers in these and many other industries using the applications listed:

- Education
- Finance
- Government
- Healthcare and Insurance
- Manufacturing
- Service Bureaus
- Utilities
- Statements
- Bills
- Checks
- Invoices
- Letters
 - Policies
 - more ...

Functions and Features

Load and save native Xerox resources

Generate Metacode and Normalized Metacode documents

Define data tags to merge variable data, such as Name and Address in forms

Convert forms into PDF documents

Import tag definition lists or create your own tags

Form Editor

Drag and drop design elements

Color support for all elements

Apply Xerox standard screen and shade patterns

Text wrapping, justification, and rotation

Spellcheck all text or individual words as text is entered

Use grids and guidelines to facilitate overlay design

Digital and graphic rulers with choice of unit measure

Convert and Import Files into DesignPro Tools

Convert Windows documents into Xerox forms or Normalized (tagged) Metacode documents. Supported packages: Microsoft® Word, Adobe® Acrobat®, Adobe® InDesign®, Adobe® PageMaker® and many more

Converters

Convert all native and Elixir document, form, font and image formats

Use command-line converters for batch, offline conversions

Automate conversion tasks

Font Editor

Create and edit Xerox raster fonts

Edit a font, an individual character or blend characters together

Display and edit Xerox font header information

Control font metrics

Transforms include: reverse, halftone, and mirror

Tile images into fonts for improved printer performance

Graphics Editor

Full image transformations include resize, rotate, lighten, darken, mirror, outline, filter, shift, reverse, and halftone. Tile images into a font, control sizing and sequencing of tiles. Includes palettes of specialized Xerox screen and shade patterns

Worldclass Support, Training and Services

- Customer support is available via phone and online with offices in North America, Europe and Asia
- Training available at your site, at Elixir headquarters or online
- Professional Services can provide application development on Elixir products as well as other development needs
